

Moving Day

Shifting Power Checklist

If you're after an expert in moving sharemilkers' power for the new season, look no further than our partner - Meridian Energy.

Here's National Agribusiness Manager, Dave Greenwood's advice on managing your power in the early days on your new farm.

Read your meters

In the few days after you've moved in, send us your meter readings to ensure your first bill is based on your usage - not someone else's.

Check you're getting all your bills

When you're busy finding your way round the new patch, it's easy to overlook a missing bill for one of your worker's houses or a pump way down the back. If you think anything's missing, give us a call and we'll look into it for you.

Keep tabs on energy use

Sign up to our free online tool that allows you to monitor your energy usage, update your details and receive and pay your bills.

Have your electricity capacity checked

Make sure you're not paying for capacity you don't need. A sparky or your local network company will be able to check your meter configuration to see whether that's the case - as the previous farmers may have been higher electricity users than you. This is especially important if you downgrade or remove any farm machinery or equipment.

Compare prices

Keep your power under one roof. If any sites at your new farm are with other power companies, switch them to Meridian to make it easy to manage. We'll send you a no obligation price comparison so you can see what you might pay before you sign up.
